South Main Street Traffic Corridor Study Community Opinion Survey

Maryville, MO – The City of Maryville has hired SK Design Group, Inc. to perform preliminary traffic engineering and study on the South Main Street Corridor. It is anticipated that the study document will guide future decision making for infrastructure investment and development along South Main Street and adjoining areas identified in the Maryville Comprehensive Plan.

Public involvement is an essential component of the South Main Street Traffic Corridor Study and plays a key role in highlighting critical issues and long-term solutions for the corridor. As a part of the public involvement process, the City of Maryville and SK Design Group, Inc. have launched a ***Community Opinion Survey*** designed to identify common concerns for area residents and frequent users of the corridor. Your input is critical and the ***Community Opinion Survey*** can be found at: www.maryville.org/southmain

The South Main Traffic Corridor Study webpage will be utilized throughout the course of the project to receive further input and share additional information. It is estimated that the final report will be prepared and presented to the Maryville City Council by the end of 2014.
